DATA ANALYST

HR Workforce & Attrition Insights

1. Overview

Developed an interactive HR Workforce Attrition Dashboard in Power BI to provide a clear and centralized view of employee trends and attrition. The dashboard analyzes data for **1,470 employees** and tracks key metrics such as **attrition rate (16.12%)**, employee count, average salary, job satisfaction, and work-life balance. It enables HR teams to quickly identify high-risk groups by department, tenure, age band, job level, gender, and overtime, supporting faster and more informed workforce decisions.

2. Main Highlights (Cards)

- **Total Employees (1,470):** Shows the overall workforce size included in the analysis, helping HR understand the scale of the organization.

- **Attrition Count (237):** Indicates the number of employees who left the company, which helps measure employee turnover volume.

- **Attrition Rate (16.12%):** Displays the percentage of employees who left, allowing HR to quickly assess whether attrition is within an acceptable range.

- **Average Salary (6.5K):** Represents the mean salary of employees, useful for understanding overall compensation levels.

- **Average Age (37 years):** Provides insight into the workforce age profile, helping HR evaluate workforce maturity and planning needs.

- **Average Job Satisfaction (2.6 / 5):** Measures overall employee satisfaction level, which is an important indicator of engagement and potential attrition risk.

- **Average Work-Life Balance (2.7 / 5):** Reflects employees' perception of work-life balance, helping HR identify possible burnout or retention concerns.

3. Department-Wise Insights

- **Highest Attrition Sales Department:**

The Sales team shows the highest number of employee exits, indicating a potential retention risk area that may require focused HR attention.

- **Moderate Attrition Research & Development (R&D):**
R&D has a relatively stable workforce but still contributes a noticeable share of attrition, suggesting the need for ongoing monitoring.

- **Lowest Attrition Human Resources:**
The HR department records the lowest attrition, reflecting comparatively better employee stability in this function.

- **Workforce Distribution Insight:**
A large portion of employees belong to the R&D and Sales departments, which naturally influences overall attrition trends.

- **Business Impact:**
Department-level analysis helps HR teams identify where turnover is concentrated and supports targeted retention strategies for high-risk departments.

4. Age Band Analysis

- **Highest Attrition Age 26–35:**
Employees in the **26–35 age group** show the highest attrition, indicating that early- to mid-career professionals are more likely to leave. This group may require focused retention and career growth initiatives.

- **Moderate Attrition Age 18–25:**
The **18–25 age group** also contributes to attrition but at a lower level than 26–35, suggesting some early-career turnover that should be monitored.

- **Lower Attrition Age 36–45:**
Employees in the **36–45 range** demonstrate better stability, likely due to higher role maturity and job security.

- **Lowest Attrition Age 46 and above:**
Senior age groups show minimal attrition, indicating strong retention among experienced employees.

- **Business Insight:**
Age-wise analysis helps HR identify that **younger and mid-career employees are the primary attrition drivers**, enabling targeted engagement, compensation review, and career development programs

5. Tenure / Years at Company Analysis

- **Highest Attrition Early Tenure (0–2 Years):**
Employees with **0–2 years of service** show the highest attrition, indicating most exits happen in the early stage of employment. This suggests possible issues in onboarding, role expectations, or early engagement.

- **Moderate Attrition 3–5 Years:**
The **3–5 years tenure group** shows moderate turnover, meaning some mid-tenure employees are still at risk and should be monitored.

- **Lower Attrition 6–10 Years:**
Employees with **6–10 years of experience** demonstrate better stability and stronger organizational commitment.

- **Lowest Attrition 10+ Years:**
Long-tenured employees have minimal attrition, reflecting high loyalty and retention among experienced staff.

- **Retention Pattern Insight:**
The attrition trend clearly declines as employee tenure increases, showing that retention improves with time in the organization.

- **Business Impact:**
Tenure analysis highlights that **new employees are the most vulnerable to leaving**, enabling HR to strengthen onboarding, early engagement, and mentoring programs to improve retention.

6. Overtime Impact Analysis

- **Higher Attrition in Overtime Group:**
Employees who worked overtime show a significantly higher attrition rate compared to those who did not work overtime.

- **Work-Life Balance Concern:**
The pattern suggests that extended working hours may be affecting employee satisfaction and contributing to higher turnover.

- **Better Retention Without Overtime:**
Employees with no overtime demonstrate relatively stronger retention and workforce stability.

- **High-Risk Employee Segment:**
The overtime group emerges as a key risk category that requires closer HR monitoring and intervention.

SUPESH MURHEKAR

- **Business Impact:**

These insights help HR teams review workload management, optimize staffing, and implement work-life balance initiatives to reduce employee attrition.

7. Key Business Recommendations

- **Improve early employee support:**
  Most employees leave within the first 0–2 years, so HR should strengthen onboarding, provide mentoring, and conduct regular follow-ups with new hires.

- **Focus on Sales department:**
  Since attrition is highest in Sales, review workload, targets, and incentive plans. Extra engagement and support may help reduce exits.

- **Control overtime workload:**
  Employees working overtime are leaving more often. HR should balance workload, hire where needed, and promote better work-life balance.

- **Support junior employees:**
  Higher attrition at Job Level 1 and 2 shows that early-career employees need clear growth paths, training, and career guidance.

- **Improve employee satisfaction**:
  Regular feedback surveys, recognition programs, and wellness initiatives can help improve job satisfaction and retention.

- **Use dashboard for regular monitoring:**
  HR should use this Power BI dashboard regularly to track attrition trends and take timely action.

8. Key Learnings –

- **Early-tenure employees are most at risk:**
  The highest attrition occurs within the first 0–2 years, showing the importance of strong onboarding and early engagement.

- **Sales department needs attention:**
  Sales has the highest employee exits, indicating possible workload or target pressure issues.

- **Junior job levels show higher turnover:**
  Employees at Job Level 1 and 2 are more likely to leave, highlighting the need for better career growth and support for fresh employees.

SUPESH MURHEKAR

- **Overtime is linked to attrition**:
  Employees working overtime tend to leave more often, suggesting work-life balance is a key retention factor.

- **Attrition decreases with experience:**
  Employees with longer tenure and higher job levels show better stability and loyalty.

- **Power BI enables faster HR insights:**
  The dashboard simplifies workforce monitoring and helps HR teams make quicker, data-driven decisions.

Conclusion

The HR Workforce Attrition Dashboard provides a clear and data-driven view of employee turnover and workforce trends. By analyzing **1,470 employee records**, the dashboard highlights key risk areas such as early-tenure employees, junior job levels, the Sales department, and employees working overtime.

The insights show that most attrition is concentrated in specific employee segments rather than being evenly distributed across the organization. This creates an opportunity for HR teams to take targeted actions such as improving onboarding, managing workload, and supporting early-career employees.

Overall, the Power BI dashboard successfully replaces manual reporting with an automated, interactive solution. It enables HR stakeholders to monitor workforce health in real time, identify potential retention risks early, and make informed, data-driven decisions to improve employee retention and workforce planning.
